General

This presentation has been prepared by GreenLight Metals Inc. (the “Company” or “GreenLight”) and is based on public information and the Company’s confidential information. This presentation is provided solely for informational purposes and is being made on a confidential basis solely to enable prospective qualified investors authorized by the Company, to evaluate the securities of the Company. It is not, and under no circumstances is to be construed as, a prospectus, or advertisement or a public offering of securities, and does not constitute an offer to buy, sell, issue or subscribe for, or the solicitation of an offer to buy, sell, issue or subscribe for any securities in any jurisdiction in which such offer, solicitation or sale would be unlawful. The information contained in this presentation: (a) is confidential and is being provided to you solely for your information and may not be reproduced, in whole or in part, in any form or forwarded or further distributed to any person other than your professional advisors in order to assist you with an evaluation of the Company, (b) is provided as at the date hereof and is subject to change without notice, (c) does not purport to contain all the information that may be necessary or desirable to fully and accurately evaluate the Company (including any investment in securities of the Company), and (d) is not to be construed as a recommendation by the Company that any person make an investment in the Company. Any unauthorized use of this presentation is strictly prohibited. This presentation should not be construed as legal, financial or tax advice to any individual, as each individual’s circumstances are different. Readers should consult with their own professional advisors regarding their particular circumstances, and under no circumstances should readers base any decision on whether to invest in the Company solely upon the material provided herein. Recipients of this presentation who are considering acquiring securities of GreenLight are reminded that any such purchase or subscription must not be made solely on the basis of the information contained in this presentation but are referred to the entire body of publicly disclosed information regarding GreenLight and the entirety of any agreements, term sheets and other disclosure which is provided in connection with any such acquisition of securities, and any other information being furnished to the investor. Neither the delivery of this presentation nor any sale of securities by the Company shall under any circumstances imply that the information set forth herein is correct as of any date subsequent to the date hereof. Neither the Company nor any of its advisors, agents or representatives shall bear any liability (in negligence or otherwise) for any loss arising from any use of these presentation materials or their contents or otherwise arising in connection with these materials. By reviewing this presentation, you acknowledge and agree (i) to maintain the confidentiality of this presentation and the information contained herein, (ii) to protect such information in the same manner you protect your own confidential information, which shall be at least a reasonable standard of care, and (iii) to not utilize any of the information contained herein except for information purposes and not transmit, reproduce or make available to any person, other than your professional advisors, this presentation or any of the information contained herein. There are certain risks inherent in an investment in the securities of the Company that prospective investors should carefully consider before investing in the securities of the Company. Certain information contained herein includes market and industry data that has been obtained from or is based upon estimates derived from third party sources, including industry publications, reports and websites. Third party sources generally state that the information contained therein has been obtained from sources believed to be reliable, but there is no assurance or guarantee as to the accuracy or completeness of included data. Neither the Company nor its agents have independently verified the accuracy, currency or completeness of any of the information from third party sources referred to in this presentation or ascertained from the underlying economic assumptions relied upon by such sources. The Company and its agents hereby disclaim any responsibility or liability whatsoever in respect of any third party sources of market and industry data or information.

The securities will not be and have not been registered under the U.S. Securities Act or the securities laws of any state of the United States, and if sold in the United States or to, or for the account of benefit of, U.S. Persons, will be “restricted securities” within the meaning of Rule 144 under the U.S. Securities Act. The securities may be resold, pledged or otherwise transferred only pursuant to an effective registration statement under the U.S. Securities Act or pursuant to an applicable exemption from the registration requirements of the U.S. Securities Act.

IN MAKING AN INVESTMENT DECISION, INVESTORS MUST RELY ON THEIR OWN EXAMINATION OF THE COMPANY AND THE TERMS OF THE APPLICABLE OFFERING, INCLUDING THE MERITS AND RISKS INVOLVED. THE SECURITIES HAVE NOT BEEN APPROVED OR DISAPPROVED BY THE SECURITIES AND EXCHANGE COMMISSION OR BY ANY STATE SECURITIES COMMISSION OR REGULATORY AUTHORITY. NO SECURITIES REGULATORY AUTHORITY OR SIMILAR AUTHORITY HAS REVIEWED OR IN ANY WAY PASSED ON THE ACCURACY OR ADEQUACY OF THIS PRESENTATION. ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.

All information is presented in Canadian dollars unless otherwise stated, as of the date indicated on the face page of this presentation.

Qualified Person

Tom Quigley, Director of Exploration, a Qualified Person as defined by National Instrument 43-101 – Standards of Disclosure for Mineral Projects (“NI 43-101”), reviewed and approved the technical data and information in this presentation.

Historical Resource Disclaimer

The reader is cautioned that the referenced “historical mineral resource” estimates in this presentation are considered historical in nature and as such are based on prior data and reports prepared by previous property owners. A qualified person has not done sufficient work to classify the historical estimates as current resources and GreenLight is not treating the historical estimates as current resources. Significant data compilation, re-drilling, re-sampling and data verification may be required by a qualified person before the historical estimate on the properties can be classified as a current resource. Investors should not rely on the historical estimates as current mineral resources or mineral reserves until they have been verified and supported in a technical report in accordance with NI 43-101. There can be no assurance that any of the historical mineral resources, in whole or in part, will ever become economically viable. In addition, mineral resources are not mineral reserves and do not have demonstrated economic viability. Even if classified as a current resource, there is no certainty as to whether further exploration will result in any inferred mineral resources being upgraded to an indicated or measured mineral resource category.

Laying the groundwork to create the next critical minerals champion in the State of Wisconsin

FIRST MOVER ADVANTAGE IN ONE OF NORTH AMERICA'S MOST PROSPECTIVE VMS BELTS

First mover advantage in one of North America's most prospective VMS belts – Penokean Volcanic Belt is akin to the Abitibi or Flin Flon 80-years ago

Wisconsin focused team with track record of success in exploration, permitting, project financing, and capital markets

Control several of the Belt's most prospective deposits; strategy focused on resource expansion, target generation, and project acquisition

Exploring for critical metals to support federal decarbonization efforts – goal for Wisconsin to become a critical minerals leader in the USA

Leadership Team: significant representation from Wisconsinites

Core Leadership Team

Matt Filgate
President & CEO

- 15 years experience in mineral exploration, mine development, and corporate development
- Most recently VP, Corporate Development and Senior Geologist at Talisker Resources; Geologist with Barkerville Gold Mines

David Carew
CFO

- 15+ years experience in corporate development, investor relations, mineral project evaluation and capital raising
- Past experience includes VP of Corporate Development & Investor Relations at TSX and TSXV listed developers

Steve Donohue
Director

- 30+ years experience focused in natural resource project permitting and community engagement across Wisconsin & Midwest
- Recent experience includes VP, Mining at Foth Infrastructure and Environment

Board of Directors

Jason Kosec
Director

Barry Hildred
Director

Ryan Bennett
Director

Gordon Reid
Director

Angela Pakes
Director

Bill Johnson
Director

= Wisconsinite or direct connection to Wisconsin

Wisconsin: rich mining history with untapped potential

- **Penokean Volcanic Belt was actively explored and mined from 1960s-1997**
 - Richly endowed with Cu / Zn, +40 blue chip mining companies explored PVB before 1997; 14 deposits discovered, 4 deposits with significant scale
- **1997-2017: No mining activity due to moratorium**
- **2017: Wisconsin Mining For America Act: pro-mining legislative statement**
 - **Pro-mining:** repealed the 1997 mining moratorium
 - **Policy statement:** ensures mining & environmental stewardship can co-exist
 - **Permitting overhaul:** expedite process based on lessons learned at Crandon and Flambeau
 - **Envisions “Line of Sight” for permitting:** site, permit, and operate a mine within 5-years

PVB remains significantly under explored – GLM is currently one of the only active exploration companies in the PVB

▶ **Wisconsin:** storied mining history dating back to the 1800s with numerous lead, zinc and iron mines

▼ Wisconsin dubbed the "Badger State" after lead miners in 1820s and 1830s

Mines can be permitted on Wisconsin PVB

Successfully reclaimed Flambeau Mine

Share Structure & Ownership Summary

Share Structure¹

Current Basic Shares Outstanding	65.8M
Warrants (C\$0.47 avg. strike)	7.3M
Stock Options (C\$0.32 avg. strike)	3.3M
RSUs	0.8M
DSUs	0.9M
Fully Diluted Shares Outstanding	77.9M
Current Market Cap. (C\$0.20)	~C\$15.6M

Key Strategic Investors

O R O G E N

Wisconsin Portfolio: high quality projects along untapped VMS belt

Bend

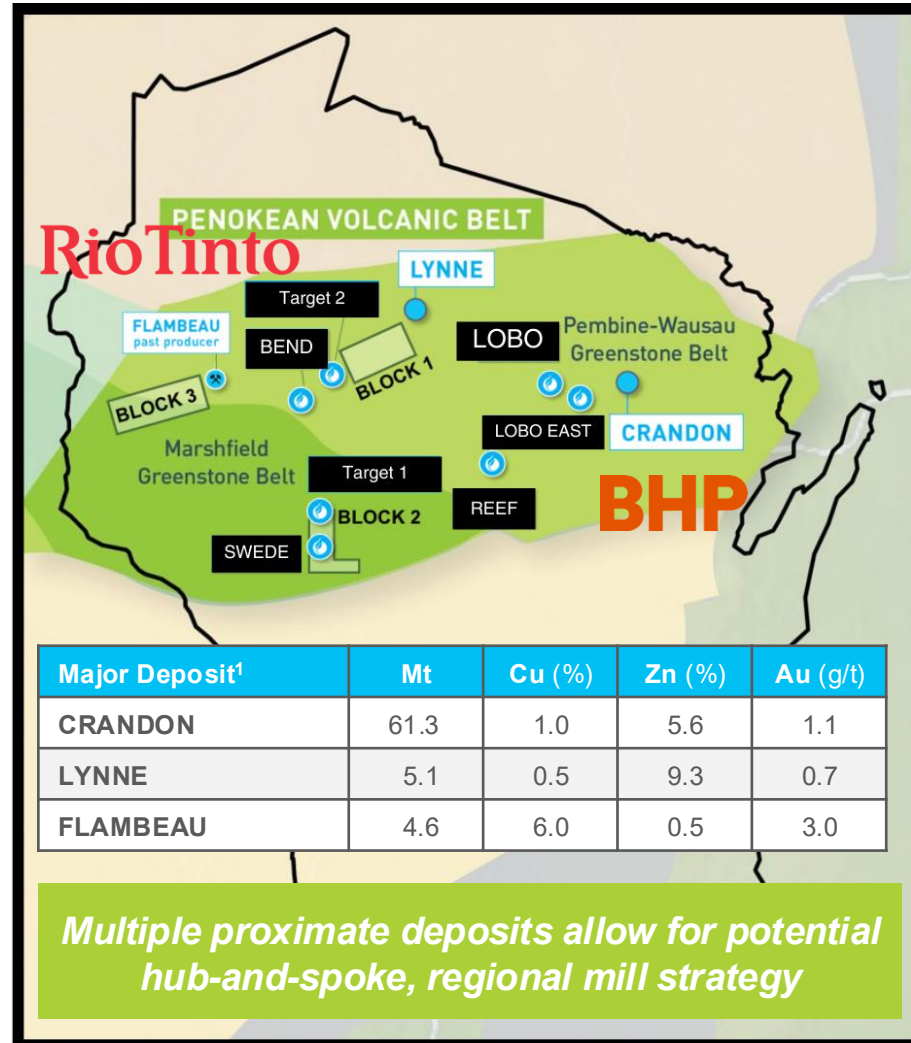

- VMS deposit; UG potential with high-grade copper, gold & tellurium
- Same trend as former producing and reclaimed Flambeau mine

Reef

- High-grade shear hosted gold deposit with historical resource
- Open down-dip and on strike to the NE and SW - drill targets identified

Lobo / Lobo East

- High-grade massive sulphide discovery with drill targets identified
- Next door to Crandon: significant undeveloped VMS deposit

Swede

- Top priority exploration anomaly located on southern greenstone belt
- Magnetic / gravity surveys identified potential massive sulphides

Flambeau (Rio Tinto)

- Successfully permitted in 4-years
- Operating mine (1993-1998); ore direct shipped to Kidd Creek Mine
- Successfully closed and reclaimed

Crandon (Private)

- Geologically significant project previously owned by BHP
- Abandoned in 2003 months away from receiving EIS and draft permits

1: Major Deposit tonnage and grade estimates from Bend Technical Report: "An Evaluation of the Bend Volcanogenic Massive Sulfide (VMS) Deposit, Taylor County, Wisconsin, U.S.A.", with an effective date of January 1st, 2025.

BEFORE

AFTER

Flambeau Mine – Before & After Reclamation

Environment, regulatory compliance, and benefitting local communities are core to our Wisconsin strategy

VMS Deposits: the gift that keeps on giving...

What is a VMS Deposit?

- Volcanogenic Massive Sulphide (VMS) deposits are one of the richest sources of metals such as copper, lead, and zinc globally.
- VMS deposits can also produce economic amounts of gold and silver as byproducts of mining these deposits.
- Currently, global metal production from VMS deposits account for 22% of zinc, 9.7% of lead, 6% of copper, 8.7% of silver and 2.2% of gold

Where are VMS Deposits Found?

- VMS deposits occur around the globe and often form in clusters or camps, following the tectonic plate boundaries in areas of ancient underwater volcanic activity.

Penokean Volcanic belt: re-opened prolific and highly prospective greenstone district hosts high-grade Copper / Zinc VMS deposits with high concentrations of tellurium

Example VMS - Kidd Mine (Timmins, ON), in production since 1966:

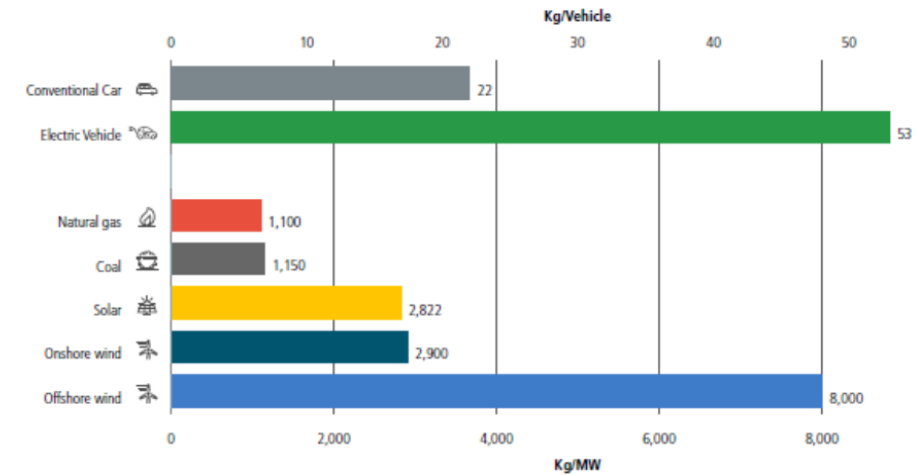

Source: Visual Capitalist - Everything You Need to Know on VMS Deposits

Copper: abundant in Wisconsin & essential for global decarbonization

Copper is Essential for Decarbonization, Demand to Grow:

- Copper plays a pivotal role in the shift toward clean, carbon-free energy. Power grids and electric vehicles are heavily dependent on copper for efficient electricity transmission.
- Copper has been designated as a critical mineral by major global forces including the European Union, the U.S., Canada, Japan, China and India
- By 2050, it's projected that the global electric grid will need to double in capacity to meet the increase in electricity demand

EVs & Renewables Require More Copper

Federal & State Level Support for Copper:

- Copper's role as a critical mineral in the U.S. has led to its inclusion in over US\$30 billion of funding from the Inflation Reduction Act
- Key examples: U.S. Department of Energy's US\$2 billion loan to Redwood Materials for battery recycling and anode copper foil production; State of Michigan's US\$50 million grant for Highland Copper's Copperwood Project

Copper Supply & Demand Imbalance to Grow

Source: Sprott ETF insights, Bloomberg, Visual Capitalist

Bend Copper-Gold Project (with high tellurium concentrations)

VMS deposit with underground mining potential located ~35 miles southeast of former producing Flambeau mine

Asset Overview ^{1,2}

- 100% owned, historical-resource stage VMS deposit; located 19 miles from Medford, Wisconsin ~35 miles from Flambeau Mine
- ~520 acres federal mineral estate, 40 acres private land; excellent year-round access and powerline located within ~10 miles
- US\$7.5M has been invested on the project to date including ~21,000m of drilling across ~53 holes
- 4Mt historical resource estimate by previous operator in support of federal Preference Right Lease Application filed with BLM¹
- **Copper Zone:** 2.8Mt @ 2.41% Cu, 1.43 g/t Au, 13.70 g/t Ag
 - Significant intercepts: **38.1m @ 1.25 g/t Au and 1.69% Cu** and **67.0m @ 0.99 g/t Au and 1.01 % Cu**
- **Gold Zone:** 1.2Mt @ 4.37 g/t Au, 0.31% Cu, 2.79 g/t Ag
 - Significant intercepts: **63.1m @ 1.32 g/t Au** and **74.5m @ 1.04 g/t Au incl. 9.0m @ 2.27 g/t Au**

Historical Drilling ^{1,2}

1. Bend Technical Report: "An Evaluation of the Bend Volcanogenic Massive Sulfide (VMS) Deposit, Taylor County, Wisconsin, U.S.A.", with an effective date of January 1st, 2025; Company is not treating the historical estimates as current mineral resources or mineral reserves and the historical estimates should not be relied upon or understood to indicate the existence of reserves or resources. This historical resource estimate was prepared by Jump River Joint Venture in 1992. 2. Reported intervals are drill thickness and do not necessarily represent true thickness. Drilled by Jump River Joint Venture, Sharpe Energy & Resources, Aquila Resources Inc./Hudbay Minerals Exploration Alliance.

Bend Copper-Gold Project (cont'd)

Next phase of drilling to be focused on testing mineralized horizon along strike to NE of Soo Line 40 acres

Strategy^{1,2}

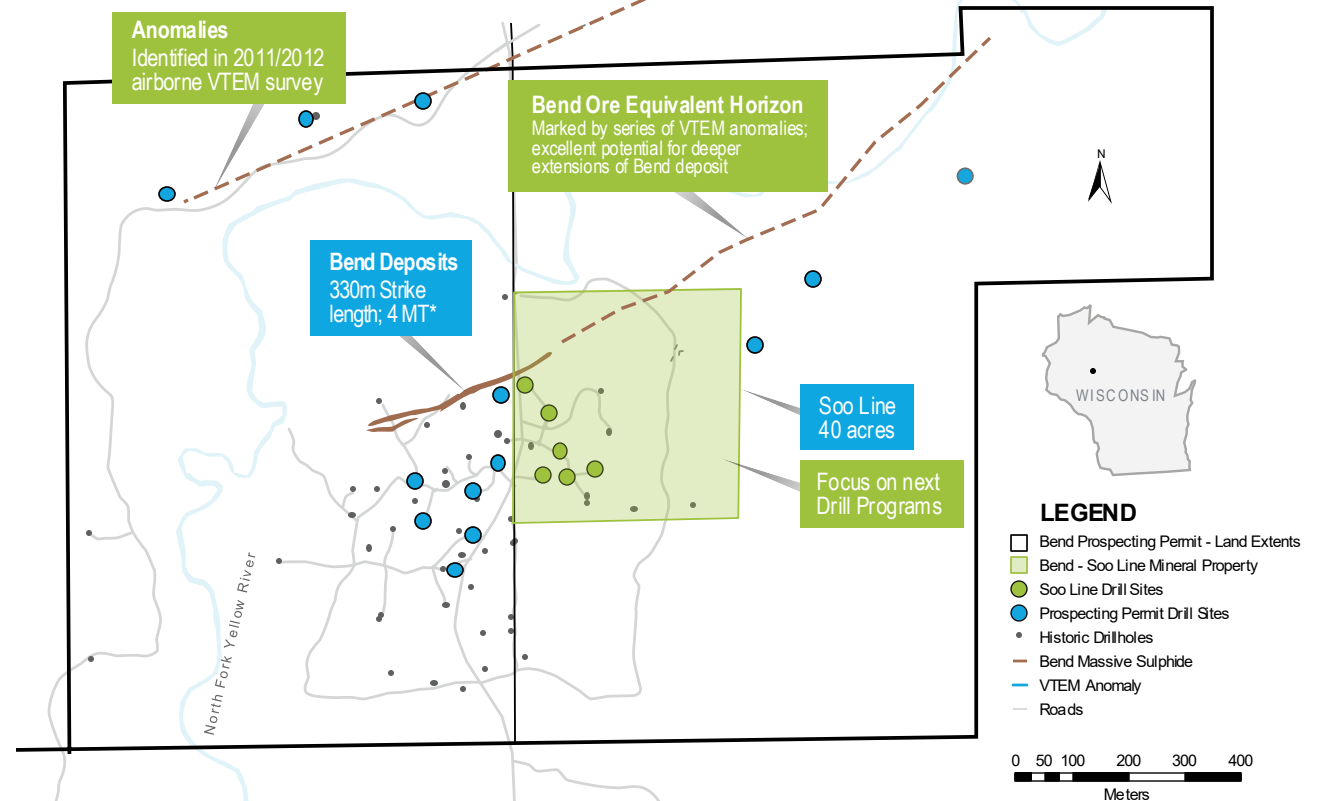

- Resource expansion drilling program will focus on:
 - ~3,000 meters testing the mineralized horizon along strike to the NE on the Soo Line 40 acres; anomalies extend at least 10 miles to the NE on strike of the Bend deposit
 - Airborne EM to identify chargeability anomalies along NE strike.
- Mineralization has been drill traced over ~350m of strike and partially tested to a vertical depth of ~600m; deposit remains open on strike and at depth.

Bend Copper Zone Drill Core

2012 massive sulphide intercept (DDH-B12-01): **2.7m @ 2.85% Cu** and 0.42 g/t Au (from 107.7-110.4m)

Plan View^{1,2}

1. Bend Technical Report "An Evaluation of the Bend Volcanogenic Massive Sulfide (VMS) Deposit, Taylor County, Wisconsin, U.S.A.", with an effective date of January 1st, 2025. Company is not treating the historical estimates as current mineral resources or mineral reserves and the historical estimates should not be relied upon or understood to indicate the existence of reserves or resources. This historical resource estimate was prepared by Jump River Joint Venture in 1992. 2. Reported intervals are drill thickness and do not necessarily represent true thickness. Drilled by Jump River Joint Venture, Sharpe Energy & Resources, Aquila Resources Inc./Hudbay Minerals Exploration Alliance.

Reef High-Grade Gold Project

Reef hosts a high-grade historical resource which is open in all directions with the potential for significant expansion

Asset Overview

- Historical resource stage orogenic shear zone hosted vein-type deposit; located in Marathon County, Wisconsin ~19 miles from the city of Wausau
- ~520-acres under option of private land with year-round access
- US\$5.2M invested to date with the last drilling in 2011-2012 returning promising results
- Mineralization extends from surface to ~140m, open in all directions; additional underground potential and copper massive sulphide potential

Historical Drilling¹

- Key drill intercepts from 2011-2012 drill program:
 - R12-38: **65.2m @ 2.80 g/t Au** and 0.17% Cu (from 80.5 m to 145.73 m) incl. **8.9m of 13.14 g/t Au** and 0.44% Cu
 - R12-40: **94.6m @ 1.53 g/t Au** (from 8.5m to 103.5m) incl. 3.90 meters of 14.89 g/t Au
 - R11-11: **14.8m @ 14.41 g/t Au** and 0.30% Cu (from 40.6m to 55.4m) incl. 9.3m @ 21.3 g/t Au and 0.33% Cu

High priority drill targets identified for next phase of drilling

► **Boulder Sample:**
Assay results of
~11 g/t Au

► **Core Sample:**
Au hosted in quartz-sulphide veins and stringers cutting sheared mafic volcanic and gabbroic rocks

1. Reef Technical Report: "An Evaluation of the Reef Gold-Copper Deposit, Marathon County, Wisconsin, U.S.A." with an effective date of March 10th, 2025; Reported intervals are drill thickness and do not necessarily represent true thickness. Drilled by Aquila Resources Inc. INVESTOR PRESENTATION

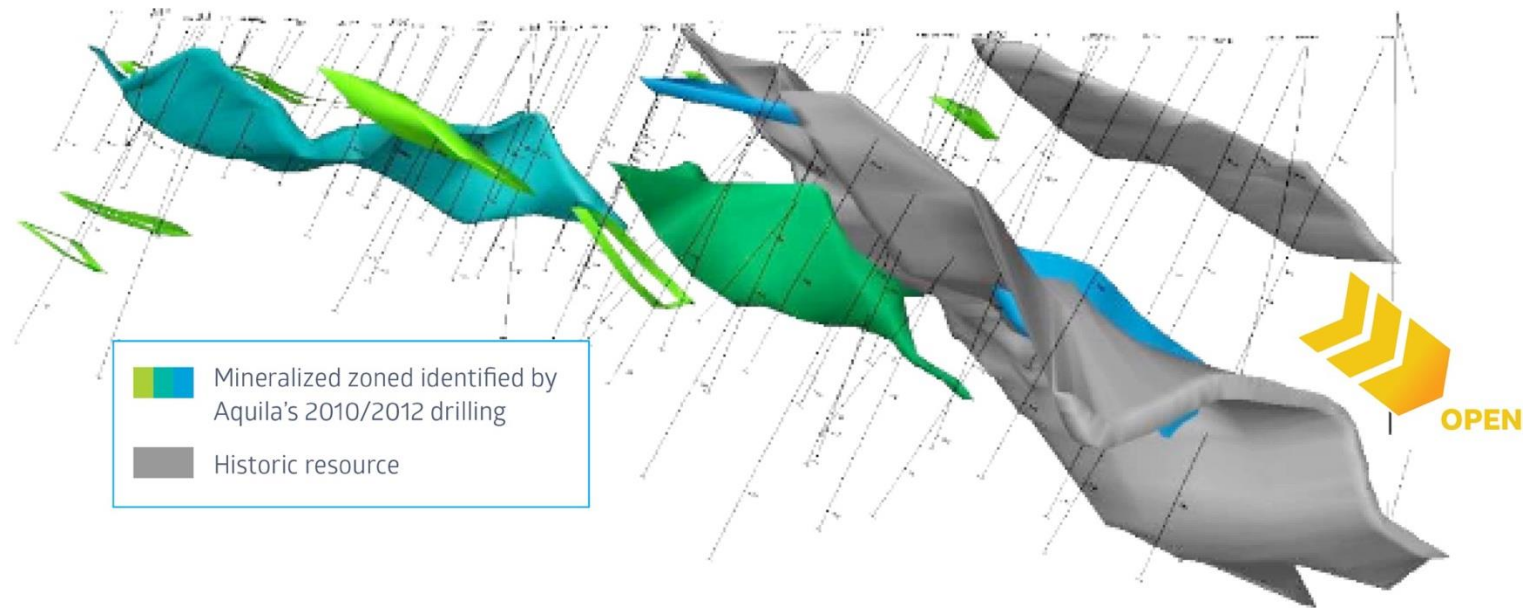

Reef High-Grade Gold Project (cont'd)

Reef demonstrates potential for additional mineralized zones peripheral to current deposit

Strategy

- Resource expansion drilling will focus on:
 - ~2,000 meters planned to confirm mineralization along strike and down dip
 - Mineralization extends from surface to 140m, open in all directions; open down-dip and on strike to NE and SW
 - Copper mineralization potential: shear-hosted quartz sulphide veins, stockworks in volcanics
 - Modelling of lower grade halos to evaluate open pit bulk tonnage scenario.

Resource Model – Looking South¹

Mineralization extends from surface to 140m, open in all directions; additional underground potential and copper massive sulphide potential

1. Reef Technical Report: "An Evaluation of the Reef Gold-Copper Deposit, Marathon County, Wisconsin, U.S.A." with an effective date of March 10th, 2025; Reported intervals are drill thickness and do not necessarily represent true thickness. Drilled by Aquila Resources Inc.

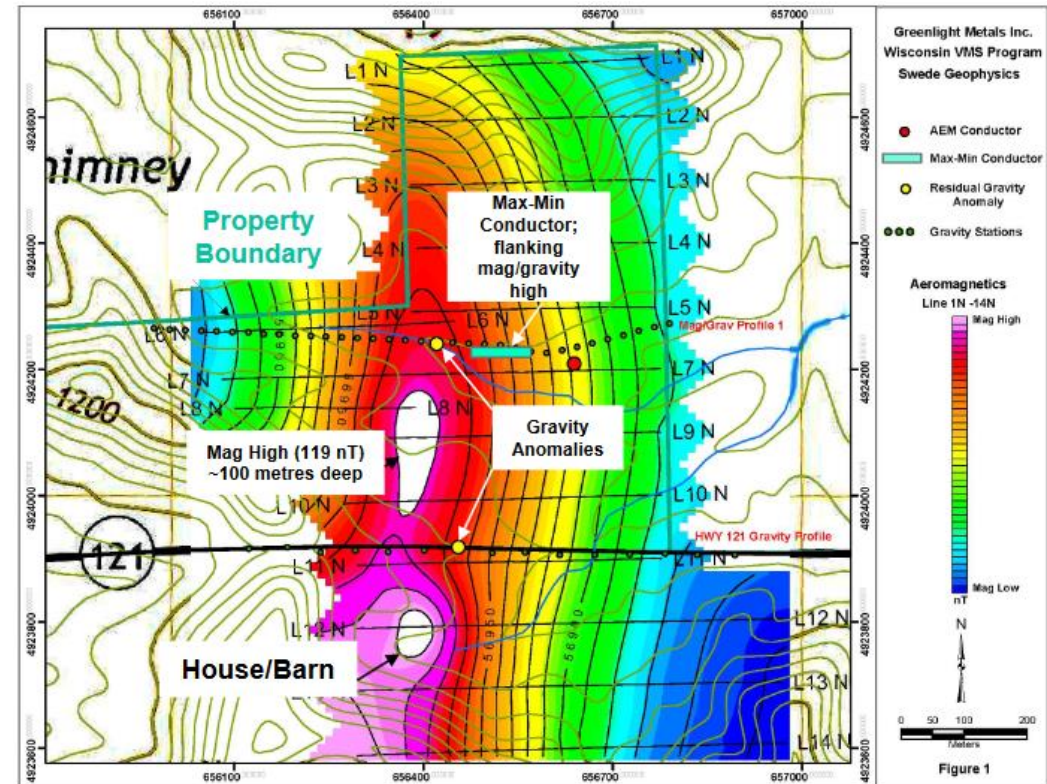

Rio Tinto's top target – high-priority anomaly located on the Southern Greenstone Belt

Asset Overview¹

- ~320 acre optioned property originally targeted by Rio Tinto
- Gravity survey identified a relatively strong gravity anomaly (0.73 mgals) along both survey lines coincident with the magnetic high striking across the entire length of the property
 - It appears that both the magnetic and gravity anomalies are caused by the same source body situated at depth
- Conductive source is positioned along the eastern flank of a major magnetic and gravity anomaly - may represent conductive massive sulfides situated along a possible mafic/felsic contact
- Magnetic survey identified a broad north/south striking magnetic high extending the entire length of the property - open ended to the south

Airborne EM planned to cover the entire project with proposed drilling to follow to test anomalies

Gravity Survey Overview¹

1. Airborne drone magnetic survey, and ground follow-up geophysics, including a gravity and horizontal loop EM (HLEM – Max-Min) survey completed by Great Lakes Exploration Inc. in September 2022

Lobo & Lobo East

High-grade massive sulphide discovery next door to Crandon: major undeveloped VMS deposit

Asset Overview

Lobo

- 100% owned high-grade massive sulfide discovery
- Several holes intersected high-grade mineralization at depths ranging from ~60m to ~340m.
- Zone remains open for expansion and northern conductor is untested

Lobo East

- Optioned property totaling 476 acres with no modern drilling
- Host to two strong geophysical anomalies; Northern target is drill-ready and hosts a coincident Mag/EM anomaly suggesting presence of massive sulphide

Geological modeling planned to define future drill targets

Lobo Historical Drilling¹

Noranda Drilling Highlights (1970s):

LB-3: 9.4m of 22.89% Zn, 1.41% Cu, 1.84% Pb, 1.14 g/t Au (246m to 255m)

Can-America Drilling Highlights (2020):

LB-20-01: 1.55m of 17.46% Zn, 0.47% Cu, 1.61% Pb, 0.14 g/t Au, 51 g/t Ag (81.8m to 83.4m)

1. Reported assay intervals are drilled thickness and do not necessarily represent true thickness. Drillhole LB-3 is archived at the Wisconsin Geological and Natural History Survey Core Repository in Mt. Horeb, WI. Quarter core samples of the entire mineralized interval were submitted for assay by Can-America in 2019. LB-20-01 was drilled by Can-America in 2020. Assays for both drillholes were completed by Minerals Processing Corporation Inc. (Carney, MI). Ground geophysical surveys including ground magnetics and horizontal loop EM were completed by Great Lakes Exploration Inc. in 2020.

Investment Highlights

Excellent Geology

Penokean Volcanic Belt – reopened perspective greenstone belt, host to high-grade polymetallic VMS deposits

Growth Strategy

Control of three of the Belt's most prospective deposits; strategy focused on resource expansion, target generation, and project acquisition

Financial Backing

Long-term institutional shareholders, high-net-worth individuals and strategic investors to support growth strategy

First Mover Advantage

One of the only companies actively exploring the Belt – representation of Wisconsinites at the management & Board level to ensure success in State

Right Team

Leadership team in place with access to capital and track record of success in exploration, resource growth and M&A = for Wisconsin, by Wisconsin

Note: Based on management estimates and strategy as of May 2025; subject to change.

Appendix

Kalium Canyon Gold Property (Nevada)

Kalium Canyon contains several low-sulphidation epithermal targets within the productive Walker Lane Trend of Nevada

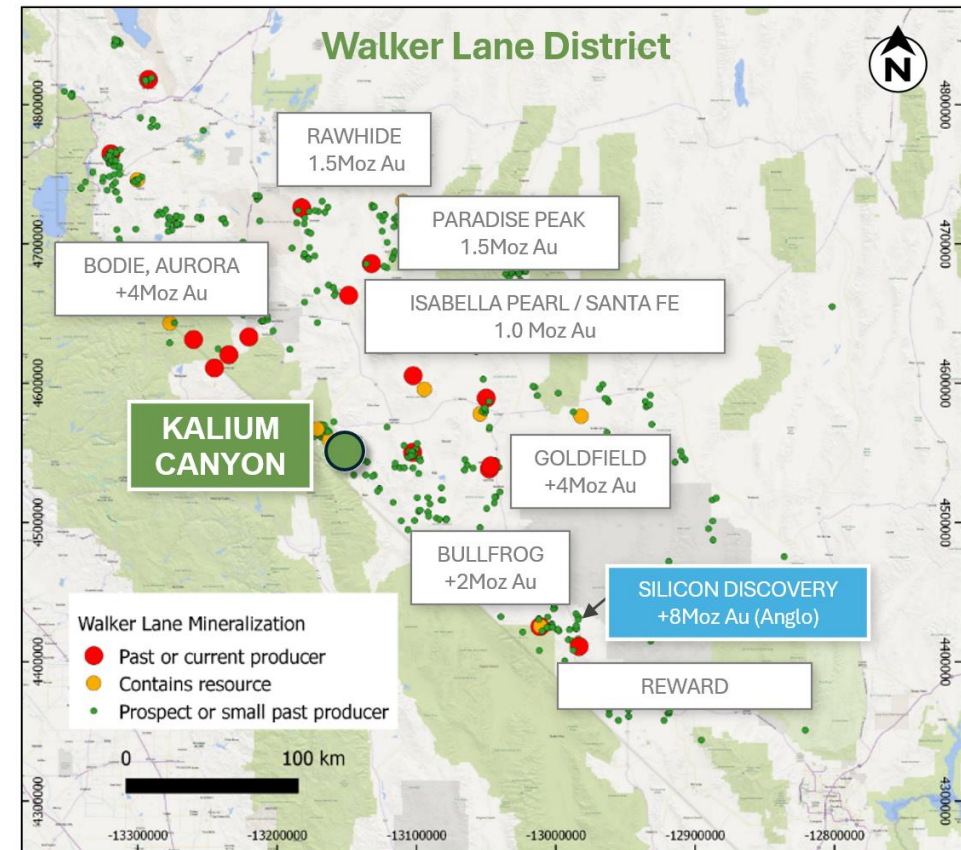

Asset Overview¹

- 100% owned property surrounded by significant and established gold projects; previously assessed by Premier Gold Mines and is believed to have high discovery potential
- Limited historic drilling in Argenta Vein target; adit returned multiple significant intercepts including **~15m at 3.7 g/t Au**
- Clear extensive strong quartz-alunite alteration at surface suggests boiling at depth and potential for bonanza grades

Mercury anomalism in multiple steam heated alteration cells

Project Location

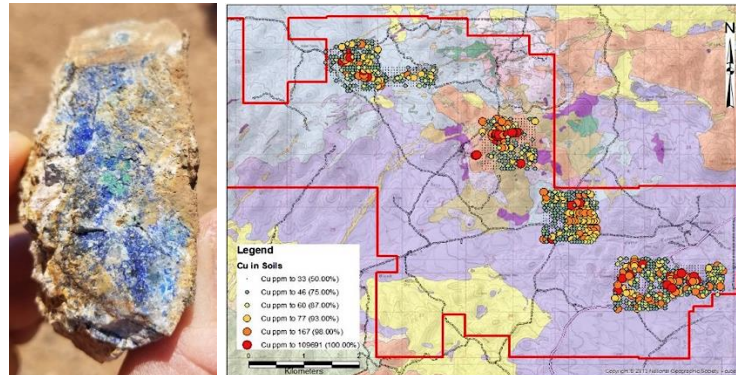

1. Kalium Canyon Technical Report: "Kalium Canyon, Goldfield Quadrangle, Esmeralda County, Nevada, United States of America" with an effective date of January 12, 2022; all drilling on the Argenta vein is historic. No drilling has been done by any property holder since Cordex in 2004. Drill cuttings, original drillhole logs, and original assay certificates for these historical drill programs are not available. The data was obtained from sources believed to be reliable but cannot be verified and have not been independently confirmed by the Company.

Cerro Colorado (Arizona)

Located in favorable geologic terrain and only ~35km from Sierrita, Mission and Twin Buttes copper porphyry deposits

Asset Overview

- Optioned property located in Pima County, Arizona; 4,455 acres of BLM land and 5,600 acres across nine ASLD sections
- District hosts Twin Buttes, Sierrita and Pima porphyry copper mines; year-round access with electrical power line on property
- Soil sampling demonstrates a large Mo anomaly, a unique porphyry Cu Mo geochemical signature; project area lacks post Laramide faulting, suggesting potential porphyry system is upright and intact

▶ Surface sampling demonstrates copper oxide mineralization; no exploration on property since 1980s

Source: Integra Resources Corp. news release from August 23, 2021; soil sampling last completed by Millennial Precious Metals Corp. in 2022
